

## Claims

1. Covering device for vehicles, in particular, for motor vehicles, comprising a tarpaulin which can be disposed onto or against the windows of a vehicle, characterized in that at least one material section is provided to form a detachable mounting of the covering device on the vehicle, which can be fixed in a closable opening of a vehicle, in particular in the region of a door and/or trunk and/or engine space opening region.
2. Covering device according to claim 1, characterized in that the material section can be clamped between a chassis forming an opening of the vehicle and a chassis part, in particular a door or a flap.
3. Covering device according to claim 1 or 2, characterized in that the material section is formed by a tarpaulin section.
4. Covering device according to any one of the preceding claims, characterized in that the material section is provided as an additional element.
5. Covering device according to any one of the preceding claims, characterized in that the material section is provided in the edge region of the tarpaulin.
6. Covering device according to any one of the preceding claims, characterized in that the material section is formed as an elongated strip which is integral with the tarpaulin at at least one of its narrow front ends.

7. Covering device according to claim 6, characterized in that the strip can be separated in the region between the narrow front ends to form two strip sections.
8. Covering device according to claim 6 or 7, characterized in that the strip comprises breaking points.
9. Covering device according to any one of the preceding claims, characterized in that mounting means are provided for a detachable connection between tarpaulin sections.
10. Covering device according to claim 9, characterized in that the mounting means comprise at least one opening which receives at least sections of a tab.
11. Covering device according to claim 9 or 10, characterized in that slotted openings are provided.
12. Covering device according to any one of the claims 9 through 11, characterized in that the tab has an insertion aid.
13. Covering device according to any one of the preceding claims, characterized in that the tarpaulin has openings to receive external mirrors of the vehicle.
14. Covering device according to any one of the preceding claims, characterized in that sections of the tarpaulin can be fixed on the vehicle using windshield wipers.

15. Covering device according to any one of the preceding claims, characterized in that the tarpaulin comprises a roof portion which is suited to cover the roof of a vehicle.
16. Covering device according to claim 15, characterized in that the roof portion has an opening for receiving a component which projects from the vehicle roof, in particular, an antenna.
17. Covering device according to any one of the claims 1 through 14, characterized in that no roof portion is provided.
18. Covering device according to any one of the preceding claims, characterized in that the tarpaulin comprises sections which are suited to cover the front window, the side windows, and the rear window of a vehicle.
19. Device for mounting a cover for vehicle windows, characterized in that the mounting is provided as additional device on the cover.
20. Mounting device according to claim 19, characterized in that the cover is disposed such that mounting is possible by opening and closing the vehicle.
21. Mounting device according to claim 19 or 20, characterized in that the mounting device is made from the same or a similar covering material as the covering device.
22. Mounting device according to any one of the claims 19 through 21, characterized in that the device is not disposed on the edge of the covering material.

23. Covering material, wherein all lateral surfaces are covered, but the roof area is not continuously covered.
24. Covering material according to claim 23, characterized in that the covering material consists of different colors.
25. Covering material according to any one of the claims 23 through 24, characterized in that the covering material is mounted via a device which is located on the covering material.
26. Covering material according to any one of the claims 23 through 25, characterized in that the covering material is mounted via a material which is similar to that of the foil.
27. Covering material according to any one of the claims 23 through 26, characterized in that the covering material comprises devices for providing passage for the external mirrors.
28. Covering material according to any one of the claims 23 through 27, characterized in that the start or the end of the covering material does not terminate at right angles.
